

Laravel Project - [taqieem]

A web application built using [Laravel 10/9/etc.], designed for [private school evaluation in Jordan by parents].

Project Structure

This is a standard [Laravel 10] application using:

- MVC architecture
 - Artisan CLI
 - Eloquent ORM
 - Blade templating engine
-

Requirements

- PHP >= 8.1
 - Composer
 - Laravel >= 9.x
 - MySQL
-

Installation

1. Clone the repository

```
bash
CopyEdit

git clone https://github.com/your-username/your-laravel-project.git
cd your-laravel-project
```

2. Install PHP dependencies

```
bash
CopyEdit

composer install
```

3. Install JS dependencies

```
bash
CopyEdit
```

```
npm install && npm run dev
```

4. Set up .env file

```
bash
CopyEdit
cp .env.example .env
php artisan key:generate
```

5. Configure .env (DB credentials, etc.)

6. Run migrations

```
bash
CopyEdit
php artisan migrate
```

7. (Optional) Seed the database

```
bash
CopyEdit
php artisan db:seed
```

8. Run the app

```
bash
CopyEdit
php artisan serve
```

Authentication

Laravel Breeze / Jetstream / Fortify / Passport is used for authentication.
To customize auth features, go to:

- /routes/web.php
 - app/Http/Controllers/Auth
-

Testing

Run tests using:

```
bash
CopyEdit
php artisan test
```
